SmartRide

By, Ashish Jagadhane And Shweta Bhosale

Modern Car Rental & Fleet Management

Streamlining urban mobility through intelligent technology — from browsing to booking, built for drivers who demand premium experiences.

 MVP PROJECT WEB PLATFORM

Why SmartRide

Project Objectives

SmartRide is built on three core pillars — delivering a seamless experience for drivers and operators alike.

Discover & Rent

A responsive platform for browsing and renting premium cars with real-time availability.

Robust Backend

Real-time fleet data powered by a reliable server-side architecture.

Secure UX

Intuitive, secure user experience from login through checkout.

UI/UX Design Language

Every visual decision reinforces SmartRide's premium, adventure-first identity.

● Dark Mode

High-contrast dark theme creates a sleek, premium automotive feel across all screens.

■ Adventure Orange

Bold accent color on primary actions — **Book Now**, **Search** — driving clear user intent.

▴ CSS Grid Layout

Fully responsive grid system that adapts fluidly from mobile to desktop.

■ Modular Navigation

Seamless access to Fleet, Services, and User Profile from any point in the app.

Under the Hood

Technical Stack

SmartRide's architecture is purpose-built for performance and scalability. Each layer is chosen for reliability, developer familiarity, and seamless integration in a local development environment.

i PHP Sessions handle authentication state across the car rental booking flow, ensuring a frictionless user journey.

Database Architecture

Three Core Tables

- 1

Cars

Model, Category (Sedan / SUV / Luxury), and Daily Rate.
- 2

Users

Registration details with secure authentication records.
- 3

Bookings

Links drivers to specific cars with date-range tracking.

Command Prompt - psql -U postgres

You are now connected to database "smartride" as user "postgres".

smartride=# select * from users

smartride=# ;

id	username	password	created_at
1	postgres	root	2026-04-05 15:11:37.563169

Fleet Management

Admins can add, update, or remove cars from the 10-vehicle fleet in real time.

Double-Booking Prevention

Smart conflict detection ensures the same vehicle cannot be rented for overlapping dates.

Preference Filtering

Users sort and filter the fleet by category, price, or driving needs to find their perfect match.

Problem → Solution

Challenges & How We Solved Them

Responsive Grid Complexity

Challenge: Maintaining consistent layouts across varying screen sizes.

Solution: CSS Grid with carefully tuned media queries ensures a polished experience on every device.

State Management Across Pages

Challenge: Preserving user and booking context between Fleet and Booking pages.

Solution: PHP Sessions carry user data seamlessly through the entire car rental flow.

What We Built

Conclusion

SmartRide successfully bridges the gap between car owners and drivers — delivering a secure, responsive, and premium car rental experience from the ground up.

Conflict-free reservation logic

What's Next

Future Scope

SmartRide's MVP is just the beginning. The roadmap focuses on deepening driver trust and operational intelligence.

Live GPS Tracking

Real-time location data for active bookings.

Email Confirmations

Automated booking receipts and reminders.

Payment Gateway

Secure in-app payments to close the loop.
